

What is T-Trak?

T-Trak is an easy way to build a scenic layout - either by yourself or with friends! Using a standardized modular system of blocks, each "module" is approximately 13" x 12 1/8" and can be decorated however you like - it's the perfect venue to let your imagination run wild!

T-Trak relies on the quality of Kato **UNITRACK** - thanks to **UNITRACK**'s strong and reliable connectors, each module can "snap" together without difficulty, making it simple to build up extensive scenic layouts from a variety of building blocks, all without requiring soldering or benchwork!

Kato 20-023 and 20-012 are the two pieces you need to build a basic module

Assembling a T-Trak module is as simple as 1-2-3! Build the base according to the freely available diagram (available at t-trak.org), glue down the track, then decorate!

Since everything is built to a specific standard, you can be as creative as you want without worrying whether or not your module will or won't fit with your local club layout or friends' modules. It just works!
